Water

Lake Tuggeranong healthy waterways plan

The Water Information Services team delivered three technical reports to the ACT Healthy Waterways team before Christmas. These three technical reports outline the new catchment model developed to support the development of the plan, a report on the cost-effectiveness of the management options and a supplementary report on the anticipated impacts of management on Lake Tuggeranong water quality. All of these reports were generated by the staff within the Water Information Services team, demonstrating the considerable technical expertise that is present. The team will now shift towards developing the underlying technical tools and information to inform the Lake Burley Griffin healthy waterways plan.
