Subject: Stromlo Settlement

Dear Hanna,

Thank you for the opportunity to view the Draft Variation 244- Stromlo Settlement.

The material contained in the variation sets out clear guidelines for the development of an improved village design within the intent of the ACT sustainability aims.

The only point of detail that will require careful attention when implemented is the use of grey water. Guidelines exist for grey water and its use is an important element of water saving for the future. The ACT Health Department can be expected to have a policy on this matter.

Best wishes,

Ian Falconer, Member Environment Protection Technical Advisory Committee
