8. Icon Water submitted the annual Biological Monitoring Report for the Lower Molonglo Water Quality Control Centre (LMWQCC). Results from the 2021-22 monitoring provide evidence the discharge from the LMWQCC into the Molonglo River is leading to an increase in total nitrogen. Appears to be a residual effect of this in the Murrumbidgee River downstream of the confluence with the Molonglo River. No significant health impacts detected to the Molonglo or Murrumbidgee Rivers.

9. AC worked with developers across the ACT ensuring measures in place to minimise sedimentation risks from building sites. Emails sent to 36 stakeholders re all ponds are dosed and discharged prior to the rain event predicted for 5 Oct onwards, maintain and check all sediment and erosion controls and clean and sweep roads to prevent debris being washed into waterways.
